I have to be healthy!

⟨SYSTEM with HOSPITAL⟩

"Health check in the toilet everyday"

Am I healthy...? "Recently my body feels heavy, but am I sick...? This is for thoes people who care about your own health but have no time to go to the hospital.
 Urine has a lot of informatin in it. An example would be, if you have a cold or not, if your eating habit is poor or not. These informations can be linked to the doctor's terminal at the hospital, and if needed, this system makes sure you get what you need ASAP, such as advice or medicine .

SYSTEM

. Flow

① First, it is attached, and data of the resident is registered.

② Urinate

③ Collect data, and send data to doctors automatically

④ Data is sent to the doctor's terminal, and diagnosed.

If there is a problem

⑤ Result is sent back

Come to the hospital
