

IPv6 Forum and Trends

WiMAX Forum PCC

July 10th, 2006

Kosuke Ito

IPv6 Forum Liaison to WiMAX Forum

IPv6 Promotion Council of Japan

IRI Ubiteq, Inc.

▶ Introduction of IPv6 Forum

- Leaders:
 - Honorary Chair: Vint Cerf
 - President: Latif Ladid
 - Chair of Technical Directorate: Jim Bound
- Global Effort driving IPv6 deployment
 - Supported by Internet Society, IAB/IETF
 - Chapters around the world
 - More than 180 direct members worldwide
- IPv6 Ready Logo Program
 - Voluntary Program for Interoperability
 - Program chair: Hiroshi Esaki

IPv6 Forum Chapters (10)

IPv6 Task Forces (20)

▶ IPv6 Forum Vision of 2010 Internet

- IPv6 is not only for IT industry, but for all industrial segments, by the improvement of RoI and by applying the Internet technology
- Service development and deployment
 - Integration of **real-space** and cyber-space
 - Apply to **public service** infrastructure
 - Integration with **broadcast** business
 - Deployment of **peer2peer** applications
- Architecture
 - True **mobility** supporting
 - **Unwired** connectivity
 - Remove NAT-boxes
 - Provide IP layer **end2end security** (i.e., IPSec) and ease of O&M
- Governance (leaded by private sector)
 - Global address management policy
 - Global capacity building (regions, tech.liaisons, human-resource)
 - Strategic inputs to NGN and FMC from the Internet point of view

▶ IPv6 is...

- IPv6 is for the next generation network
- Major benefits:
 - Number of global IP addresses sufficient to accommodating network devices to connect Internet
 - Auto-configuration feature for managed network (DHCPv6)
 - Mobility (MIPv6)
 - Simplified Architecture for secured communication (IPsec)And Others...
- When these features are coupled with a Broadband Wireless medium, potential of creating a new market is greatly increased which is longed for.

▶ Potential Market with IPv6/WiMAX

- Mobile P2P service supplementing 3G/4G
 - Mobile Voice, Data communication service
- Mobile broadcasting service
 - Easy and low-cost
 - Anytime, Anywhere Live-broadcasting
- Public Service
 - Emergency, Disaster-prevention and recovery
 - Short-term deployment, Low-cost implementation and operation
- Safety and Security Service
 - Flexible installation of monitoring cameras
 - Collection of Sensor data

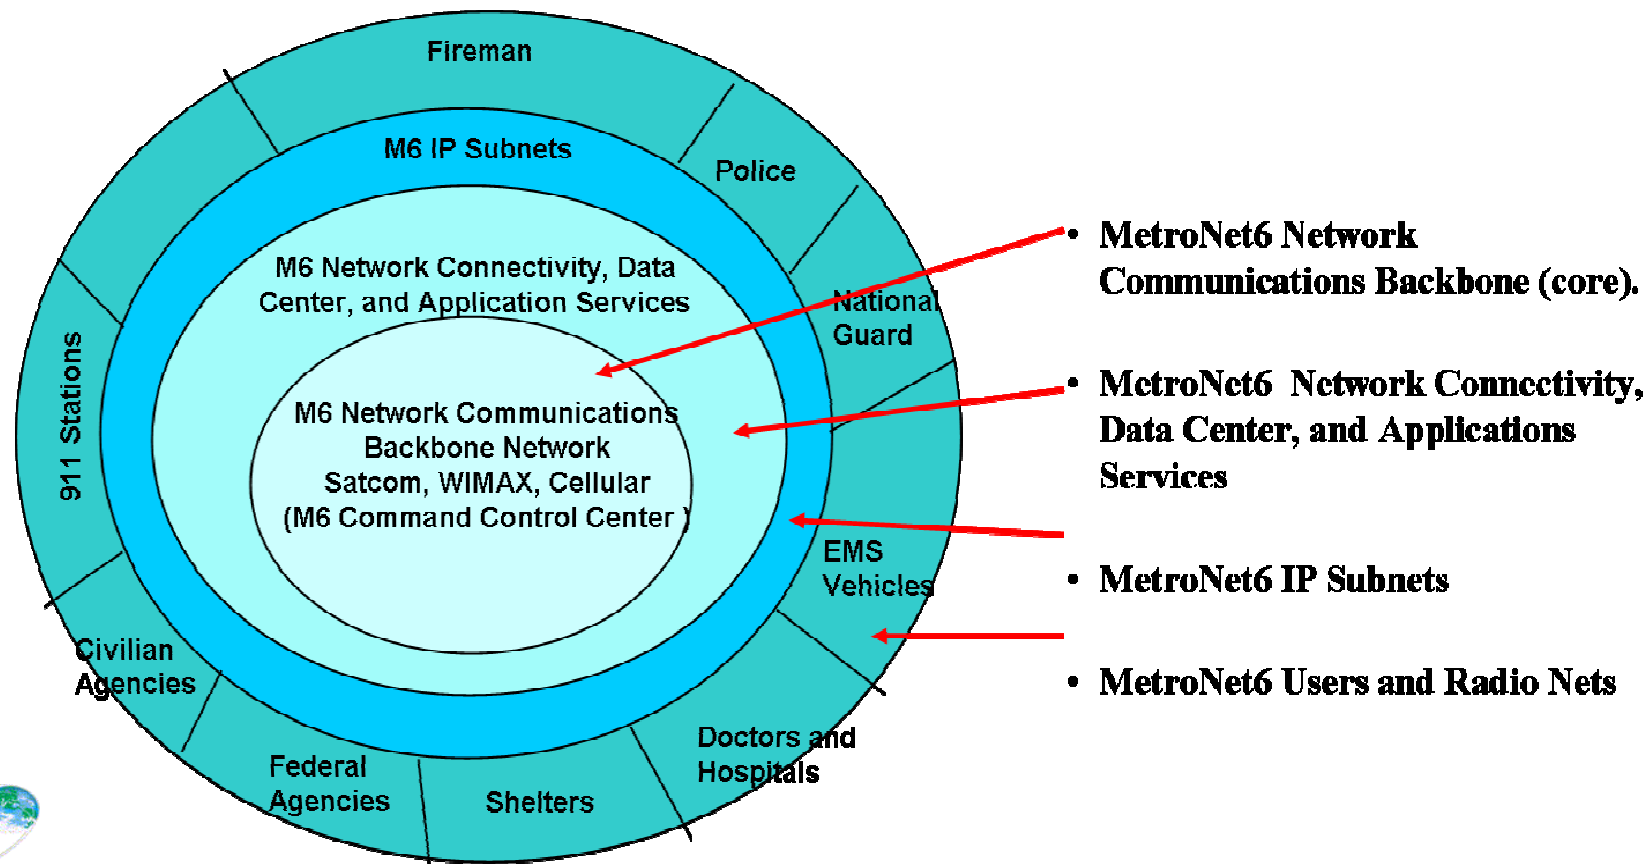

▶ MetroNet6

- MetroNet6 is:
 - End-2-End secure network communications for first responders and across their metropolitan area of operations emergency support infrastructure
 - using IEEE 802.11x, IEEE 802.16x, Satellite Communications
 - Internet Protocol suite supporting IPv6 and Mobile IPv6 to provide connectivity, interoperability, discovery, security
- Services:
 - Voice, Video, Graphics, Intelligence, Medical, and other forms of data through multimedia communications 24x7x365
- Lead by California IPv6 TF, North American IPv6 TF
 - Supported by Moonv6

▶ MetroNet6

MetroNet6 (M6) Network Communications Architecture Layers

▶ U-2010

Outline:

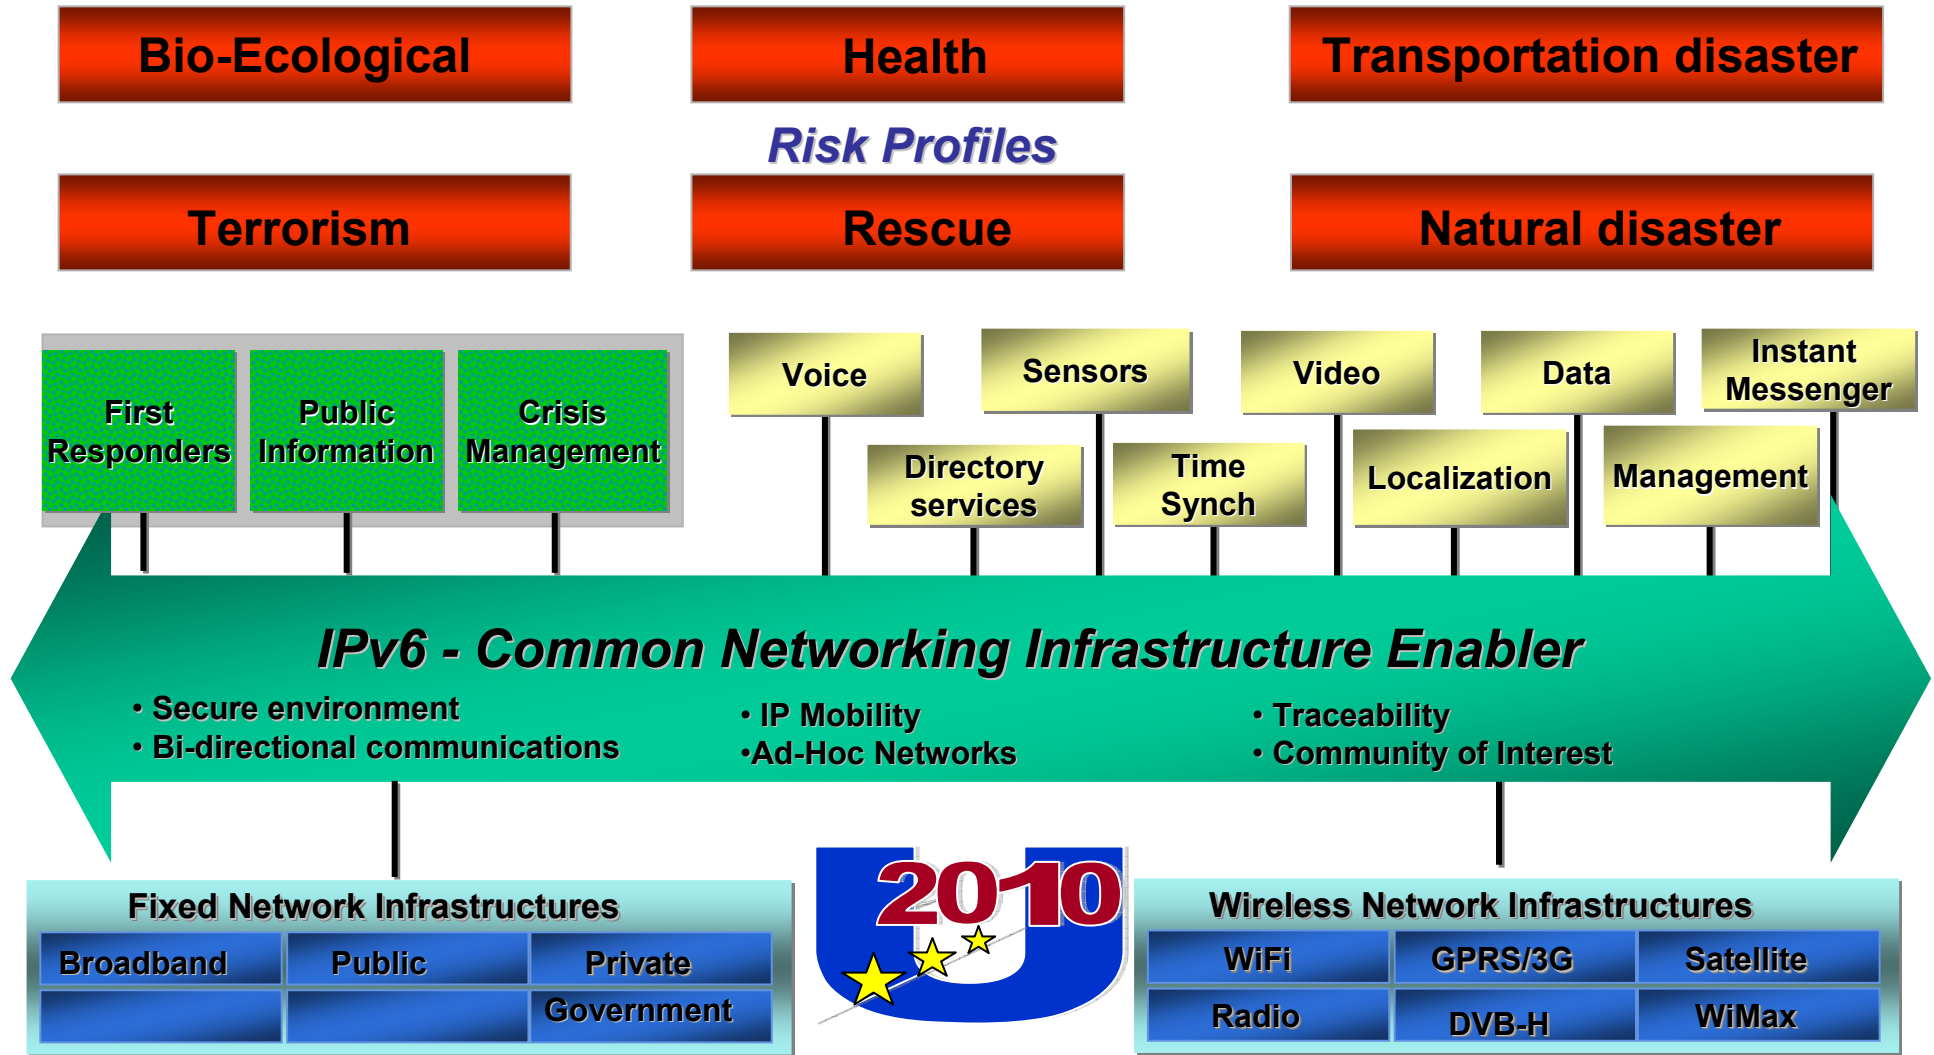

- **3 years duration**
- **16 Partners**
 - including major players in the IP business
 - with proven expertise in their fields.
 - The governments of Luxembourg and Slovenia participate to support the emergency service trials
- **€M 6.5 Project with €M 4.15 EC Contribution**

Leveraging

- IPv6
- usage of existing technology and networks,
- respecting international standards
- creating solutions that are as universal as possible

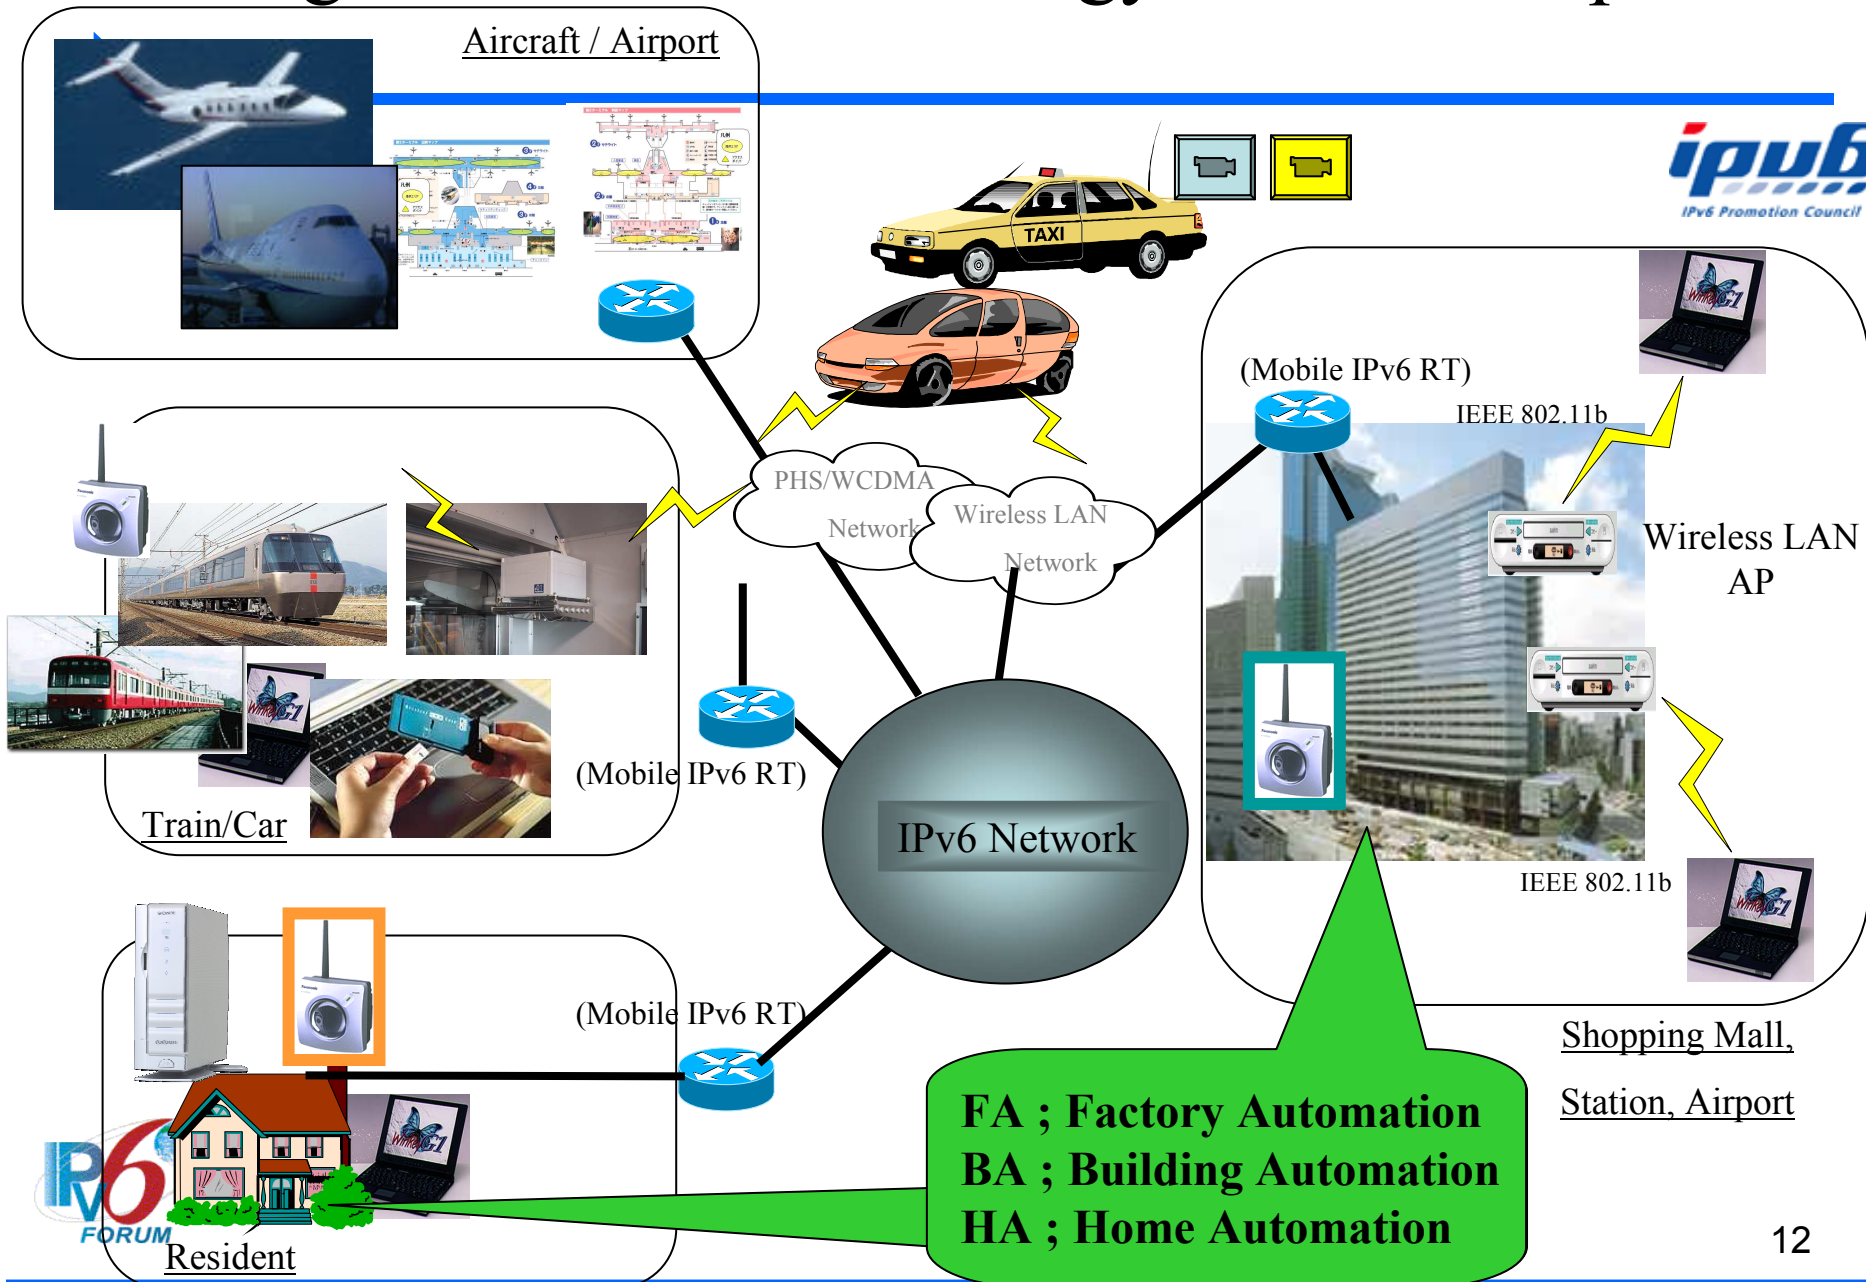

U-2010 – an IPv6 Public Safety Framework

▶ Collaboration for future

- To realize the potential market together, keep updating each forum activities and exchanging thoughts for the collaboration
- Proposal: starting WG to support both technology deployment and defining time frame and milestone
