

“Pass case that finds out the train schedule immediately”

Overview

- The pass case has a built-in monitor, which shows the train schedule during that time.
- If a train is delayed, that information is displayed in priority.

Pass Case

Monitor (train schedule)

The train schedule is displayed real-time. Information about the train can also be obtained.

Why I thought about this

- Remembering the train schedule is a pain.
- I want to know right away when the train is delayed.
- I thought that I can have some time to spare from this.
- I wanted to know accurately if the train is still moving or not due to the disaster
- I thought that by doing so, I will be able to know the train schedule right away.
