

STG (Insert and Connect) System

Overview and Steps

1. Prepare an IPv6 Memory card, such as USB memory, SD card, etc with IPv6 ID saved inside.
2. Insert into an HDD recorder or data server.
3. Prepare an STG memory card with software that finds the ID and connects automatically.
4. STG Memory card is inserted into a device (PC, Cellular Phone, PDA, HDD recorder next door) to which you want to copy data to.
5. This way, people who are weak with the internet, old/young, can create a Server-Client relationship easily.

You can also automatically copy images from cameras with STG Memory card inserted, to a device with IPv6 memory card inserted.

Other Features

- *Enclose a game software with STG memory card.
By just inserting it into a PC, mobile phone, or friend's game machine, it will automatically download the game program off the server.
- *While assuring high security, grandfather can look at TV Phone images of their grandchild easily.
(The card contains a code key which makes it impossible even if the line were to be hacked)
- *Working environment can be easily transmitted to the PC while on a business trip.
(The card contains a code key, and the second the card is pulled out, the file cannot be read)
